

Spotify Big Data Pipeline Dashboard

Docker • Kafka • Spark Structured Streaming • Delta Lake • MLflow • Databricks

This dashboard summarizes model performance, feature importance, exploratory data analysis, and regression diagnostics for the Spotify popularity prediction pipeline.

Note: The original Spotify dataset does not include a natural song-level date field, so tempo bucket analysis is used instead of a misleading song time-series chart. Streaming event timestamps belong to the pipeline simulation, not to the original song metadata.

Model Performance Analysis

Feature Importance

Exploratory Data Analysis

Regression Diagnostics

Dashboard checklist: 5 model comparison, RMSE, MAE, R², residual analysis, feature importance, popularity distribution, explicit distribution, genre distribution, tempo bucket analysis, energy-vs-danceability scatter, actual-vs-predicted scatter, and residual distribution are included.
